Analysis and Control of Boolean Networks: A Semi-tensor Product Approach (Communications and Control Engineering) Daizhan Cheng, Hongsheng Qi, Zhiqiang Li

Analysis and Control of Boolean Networks presents a systematic new approach to the investigation of Boolean control networks. The fundamental tool in this approach is a novel matrix product called the semi-tensor product (STP). Using the STP, a logical function can be expressed as a conventional discrete-time linear system. In the light of this linear expression, certain major issues concerning Boolean network topology – fixed points, cycles, transient times and basins of attractors – can be easily revealed by a set of formulae. This framework renders the state-space approach to dynamic control systems applicable to Boolean control networks. The bilinear-systemic representation of a Boolean control network makes it possible to investigate basic control problems including controllability, observability, stabilization, disturbance decoupling etc.

From reader reviews:

Seth Sawyer:

Reading a reserve can be one of a lot of action that everyone in the world loves. Do you like reading book therefore. There are a lot of reasons why people love it. First reading a publication will give you a lot of new data. When you read a guide you will get new information because book is one of many ways to share the information or even their idea. Second, studying a book will make an individual more imaginative. When you looking at a book especially tale fantasy book the author will bring someone to imagine the story how the people do it anything. Third, you could share your knowledge to some others. When you read this Analysis and Control of Boolean Networks: A Semi-tensor Product Approach (Communications and Control Engineering), you could tells your family, friends as well as soon about yours guide. Your knowledge can inspire others, make them reading a guide.

Jessica Garcia:

Spent a free the perfect time to be fun activity to complete! A lot of people spent their sparetime with their family, or their very own friends. Usually they performing activity like watching television, going to beach, or picnic inside the park. They actually doing same every week. Do you feel it? Do you want to something different to fill your own personal free time/ holiday? Could be reading a book is usually option to fill your free of charge time/ holiday. The first thing you ask may be what kinds of reserve that you should read. If you want to consider look for book, may be the publication untitled Analysis and Control of Boolean Networks: A Semi-tensor Product Approach (Communications and Control Engineering) can be good book to read. May be it may be best activity to you.

Veronica Shriner:

People live in this new morning of lifestyle always make an effort to and must have the time or they will get lots of stress from both daily life and work. So , whenever we ask do people have time, we will say absolutely of course. People is human not really a robot. Then we consult again, what kind of activity are there when the spare time coming to an individual of course your answer will probably unlimited right. Then do you try this one, reading textbooks. It can be your alternative in spending your spare time, the book you have read is Analysis and Control of Boolean Networks: A Semi-tensor Product Approach (Communications and Control Engineering).

Alex Tipton:

Are you kind of occupied person, only have 10 or even 15 minute in your day time to upgrading your mind proficiency or thinking skill perhaps analytical thinking? Then you are receiving problem with the book as compared to can satisfy your short period of time to read it because all of this time you only find book that need more time to be read. Analysis and Control of Boolean Networks: A Semi-tensor Product Approach (Communications and Control Engineering) can be your answer as it can be read by you actually who have

those short extra time problems.
