Inventory Optimization of Class IX Supply Blocks for Deploying U.S. Marine Corps Combat Service Support Elements Leonard D. Laforteza

This is a NAVAL POSTGRADUATE SCHOOL MONTEREY CA report procured by the Pentagon and made available for public release. It has been reproduced in the best form available to the Pentagon. It is not spiral-bound, but rather assembled with Velobinding in a soft, white linen cover. The Storming Media report number is A834333. The abstract provided by the Pentagon follows: Combat Service Support Elements (CSSEs) for the U.S. Marine Corps deploy with a limited number of spare parts to keep the fighting unit at its highest level of readiness. Items that are requested by the unit, but not carried by the CSSE, are backordered, resulting in lower readiness and additional transportation costs. We show how to determine which items the CSSE should take, and in what quantities, to best support a fighting unit. We have tested our model on data from a recently deployed Marine Expeditionary Unit (MEU), and the results suggest that the MEU could have experienced 13 percent fewer backorders and saved \$11,007 in shipping costs by using the model.
