Global Structure and Evolution in General Relativity: Proceedings of the First Samos Meeting on Cosmology, Geometry and Relativity Held at Karlovassi, ... 5-7 September 1994 (Lecture Notes in Physics)

The five lectures presented in this volume address very timely mathematical problems in relativity and cosmology. *Part I* is devoted to the initial value and evolution problems of the Einstein equations. Especially it deals with the Einstein-Yang-Mills-Boltzmann system, fluid models with finite or infinite conductivity, global evolution of a new (two-phase) model for gravitational collapse and the structure of maximal, asymptotically flat, vacuum solutions of the constraint equations which have the additional property of containing trapped surfaces. *Part II* focuses on geometrical-topological problems in relativity and cosmology: on the role of cosmic censorship for the global structure of the Einstein-Maxwell equations and on the mathematical structure of quantum conformal superspace.
