Breast MRI Atlas: A Case-Based Guide to Image Interpretation Gina Fundaro, Biren Shah, Sabala Mandava

Interpreting breast MRIs is challenging to breast imaging specialists as it often requires the analysis of more than 1,000 images per breast. An Atlas of Breast MRI will present a series of clinical cases detailing breast pathology through multiple MRI images, as well as benign/normal findings for comparison. Cases will also be supplemented with pathology images to illustrate the disease process at the cellular level. The book will be a valuable resource for practicing radiologists who are increasingly performing more breast MRIs in daily practice to screen high-risk patients, to assess the extent of disease in patients with known breast cancer, and to assess the integrity of breast implants. With breast MRI, the same disease process often has various presentations, and this comprehensive atlas will provide a necessary learning resource for clinicians to improve their interpretive breast MRI skills.
